ANNOUNCEMENT

OF THE

Philadelphia College of Medicine,

FOR THE

COLLEGIATE YEAR, 1854-5.

Philadelphia College of Medicine, Fifth Street, below Walnut.

PHILADELPHIA:
KING & BAIRD, PRINTERS, No. 9 SANSOM STREET.
1854.

Philadelphia College of Medicine.

PRESIDENT.

HON. ELLIS LEWIS, M. D. L.L. D.

SECRETARY.

J. R. TYSON, L.L. D.

FACULTY.

GEORGE HEWSTON, M. D.

PROFESSOR OF ANATOMY.

B. HOWARD RAND, M. D. PROFESSOR OF CHEMISTRY.

HENRY HARTSHORNE, M. D.

PROFESSOR OF THE INSTITUTES OF MEDICINE.

ISAAC A. PENNYPACKER, M. D.

PROFESSOR OF THEORY AND PRACTICE OF MEDICINE.

JAMES L. TYSON, M. D.

PROFESSOR OF MATERIA MEDICA AND GENERAL THERAPEUTICS.

JOSEPH PARRISH, M. D.

PROFESSOR OF OBSTETRICS AND DISEASES OF WOMEN AND CHILDREN.

EDWIN M. TILDEN, M. D.

PROFESSOR OF SURGERY.

B. HOWARD RAND, M. D.

DEAN.

THEODORE CASTLE, M. D.

DEMONSTRATOR OF ANATOMY.

WILLIAM EASTLAND,

JANITOR.

ANNOUNCEMENT.

COLLEGIATE YEAR, 1854--5.

I.

1. THE COLLEGIATE YEAR will open on the first Monday in October, 1854, and close about the middle of July, 1855.

2. THE SIXTEENTH SESSION of this Institution will begin on Monday,

October 9th, 1854, and close on the last Saturday in February, 1855.

3. THE SEVENTEENTH SESSION will open on the first Monday in March, 1855, and close as above.

Degrees will be conferred in March and July.

II.

In adaptation to all the purposes of Medical education, the advantages of this institution will compare favourably with those of the oldest and most popular institutions in the United States. In all the most important requisites for instruction, it yields to none. It is adequately furnished with chemical apparatus, plates, drawings, specimens of the Materia Medica, models in wax and papier maché, &c., and an excellent and very extensive anatomical and pathological Museum.

A commodious, well-lighted and warm READING ROOM is set apart for the students, where they may study, or copy their notes during the intervals

of the lectures. It will be kept open day and evening.

The College is remarkably central in its location, being within view of Chestnut street, about one hundred yards from Independence Hall, and contiguous to Independence and Washington Squares. It is about four hundred yards from the Pennsylvania Hospital. The Philadelphia Dispensary is nearly opposite. Omnibuses pass within half a square, which afford conveyance directly to Wills' Hospital. Comfortable boarding houses are numerous in the vicinity of the College.

III.

The Faculty take pleasure in announcing that they have now completed the purchase of the Building, Museum, and other property of the College, and are invested with the entire control of its affairs under a new Board of Corporators. The honour and reputation of each of its members is therefore eoncerned in sustaining the dignity, and fostering the usefulness and suecess of the institution; they are pledged and determined to spare no effort in maintaining the Philadelphia College of Medicine in a position of honourable equality, in all respects, with the best Medical Institutions of the country.

IV.

Two Courses a year will be given as usual. Those who come from a distance will thus have an opportunity to continue their studies throughout the year, in connection with the lectures, and also with the invaluable clinical advantages nowhere so abundant as in Philadelphia. It is in contemplation to extend the Summer Course to the 15th of July, which will make it nearly of the same length with the Winter Session.

The Lectures upon each branch comprise a full course upon the 'several subjects during each term. Gentlemen from the South who from delicate health, or for other reasons, may prefer a northern residence in the summer season, will thus be able to graduate upon attending two successive summer courses of lectures; although the Faculty recommend, whenever it is

eonvenient, attendance upon, at least, three eourses.

V.

The lectures delivered will be eminently practical throughout, and each

Course will eover the entire ground of the subjects assigned to it.

Five or six lectures will be delivered daily, except on Wednesdays and Saturdays, when they are suspended until mid-day, to enable the class to attend the Hospitals and other practical institutions of the city, as well as our own clinic at the College, where patients are exhibited, operations

publicly performed, and leetures delivered.

At each lecture, the professor will recapitulate, and examine advanced students, and such other members of the class as may desire to be questioned upon the subject of his previous lecture. These examinations are optional with the student, though he is advised that in declining them, he foregoes a great advantage which he might obtain in having the successive points of the course impressed upon his mind. On the other hand, by attending these examinations, he affords the professors an opportunity of deciding upon his claims to a degree, of his sedulousness in study, and of the extent and solidity of his acquirements, in a manner which might exert a very favorable influence upon his admission to the Doctorate.

VI.

The Lectures will be delivered according to the following arrangement:—

DR. HEWSTON, five times a week on General, Special, Surgical, and Microseopical Anatomy. Lecturing from the recent subject, ealling to his aid preparations, pietures, diagrams, and enlarged models of the first

class, for the correctness of illustration; directing the attention of the student to such morbid and anomalous conditions, as may develope themselves in the course of his demonstrations; paying particular attention to the mechanism of the functions, and the direct application of his subject to the practical branches.

Dr. Rand four times a week. His course will be devoted to the study of Chemistry, exclusively in its relations to Medicine. With this view all considerations of a purely technical character, as well as the applications of the science to arts not connected with medicine will be passed over. The time thus gained will be devoted to a minute and careful study of the relations of Chemistry to Materia Medica and Pharmacy, as well as its bearings upon Physiology, Pathology and Diagnosis. The subject of Toxicology will receive a full share of attention. The various poisons will be attentively considered with their antidotes and tests, which will be as far as possible applied before the class. The entire course will be freely illustrated by appropriate experiments, for which the laboratory attached to this department affords every facility.

Dr. Henry Hartshorne three times a week. The subjects of the course upon the Institutes, will be the essential facts and principles of General and Special Physiology, and of General Pathology, and Therapcutics. It will be the Lecturer's object, as far as possible, to harmonize these essential principles and facts, so as, upon their union as a basis, to establish a true Philosophy of Medicinc. The course will be, to some extent, progressive; comprising four sections,—I. Preliminary,—II. Physiological,—III. Pathological,—IV. Therapeutic; so as to present, upon the broadest ground, a scientific foundation for correct Medical Principles.

DR. PENNYPACKER four times a week on the Theory and Practice of Medicine. The purpose of the Lecturer will be to give the class a full and clear description and history of the Theories of Medicine; and also to make the Course highly practical. The means of diagnosis and cure will be faithfully exhibited and impressed. He will bring to his aid, in clucidation, notes and reflections accumulated during years of extensive practice, as well as the principal cases of disease from the numerous clinical patients who resort to the College; also drawings, pathological specimens, preparations in wax and papier machê.

Dr. Tyson three times a week, on Materia Medica and Therapeutics. His lectures will comprise a knowledge of the remedies capable of exerting a sanative influence on the human system, their methods of collection, commercial history, sensible properties and relations, physiological and toxological action, together with their doses, methods of administration, adaptation to, and modus operandi in the treatment of disease.

Dr. Parrish three times a week, on the Physiology of Reproduction, the conduct and mechanism of Parturition, and the pathology and treatment of diseases peculiar to women and children. The lectures will be illustrated by dry and wet preparations, drawings and diagrams, in such a manner as to familiarize the student with the principles and practice of

Obstetric Medicine. In order to add to his facilities in this important branch of study, a portion of time will be devoted to instructing the pupil in exercises on the mannequin; and advanced students, giving evidence of proficiency, will be admitted to the attendance of cases, and other clinical advantages, connected with the Obstetric Dispensary.

DR. TILDEN four times a week, on the Pathology and Treatment of Surgical Diseases; on operative surgery, showing—upon the recent subject—the various and most approved modes of operating in all cases requiring the use of the knife; he will elucidate his lectures by models in wax, papier maché and leather, by wet and dry preparations, drawings, &c.

The lecturer will aim at simplicity, clearness and fulness of matter relating to his branch in all its parts, paying particular attention to *Minor Surgery*, which is generally sadly neglected—yet the most important to

the Country Practitioner.

The clinic will afford the class ample opportunity of witnessing operative surgery, and the treatment of surgical diseases.

THE DEMONSTRATOR OF ANATOMY will have charge of the Anatomical Rooms, under the supervision of the Professor of Anatomy. He will superintend the dissections of the classes, facilitate their labors by his advice, and render their researches more valuable by his demonstrations.

The Anatomical Rooms are large, well lighted, thoroughly ventilated, well furnished with every convenience, and students may rely upon a full

supply of material.

VII.

FOR PRACTICAL INSTRUCTION, the students of this College will have access to the Clinical Courses of the Pennsylvania Hospital, and to the other facilities for the observation of disease with which the city abounds, on the same terms as the students of other Medical Schools.

A CLINIC is held at the College every Wednesday and Saturday, to which a large number of patients resort, to be prescribed for and operated upon in presence of the class. Arrangements are made for advanced students to attend obstetrical cases, so as to become practically familiar with the conduct of parturition. All possible means of multiplying these opportunities of clinical instruction, are employed by the Faculty.

A PHARMACEUTICAL DEPARTMENT is also established in the College Building, in which the advanced student may become practiced in compounding medicines for the clinical patients; acquiring in this manner a species of knowledge which will be of great service in the practice of his profession.

VIII.

The Faculty adopt the principles of the American Medical Association; and are earnest advocates, and desirous of being active promoters of medical reform, in the important department, especially, of medical instruc-

tion. In proof of their sincerity upon this point, they are prepared to recommend the establishment of an annual Board of Examiners, to consist of gentlemen not connected with the Colleges whose students are offered for graduation. The Faculty of the Philadelphia College of Medicine will, at any period, unite with those of the other Colleges of this city, in establishing this desirable reform. The principle upon which their sanction of such a change would be based, is, that the true test of fitness for a medical degree is merit and acquirement. All other requisites and conditions of graduation should be subordinate to these. While, therefore, the Faculty recognize the advantage and necessity of providing definite rules for the qualification of candidates, and will unite with the most strenuous in recommending the longest and fullest extension of the term of study,their experience has already convinced them of the impropricty of fixing rules of time which will be incapable of exception. Time does not always accurately measure capacity, labor, or acquisition of knowledge. If the instruction of students in the offices of their private preceptors were more thorough, (as has been suggested in some of the Reports to the National Association,) the labor of Professors would be lighter, and the qualification of graduates more complete. In any case, it is an error to suppose that, by prescribing a certain limit to the time of attendance upon lectures, we can adjudge with certainty the merits of students.

It is, therefore, in a spirit of candor and honest conviction, that the Faculty has resolved to assimilate in one respect to the universal custom of non-medical Collegiate Institutions;—by affording an opportunity to such students as may desire it, after the termination of their first course, to undergo an examination upon the fundamental branches of study, to decide whether they may be admitted as "senior students;" becoming candidates

for graduation at the end of their second session

Proposing this in perfect good faith, it is the determination of the Faculty as far as possible to enforce attention to all the regulations usual in similar institutions for the promotion of thorough preparation in the student. By the proposition already distinctly made, to unite with other Institutions in placing the examining power with an impartial Board outside of the Colleges,—it is shown that it is the wish, and will be the unwearied endeavor of this Faculty, to fit competent men for the practice of Medicine, and to encourage and promote the graduation of none who are not competent.

IX.

As a farther stimulus to exertion on the part of our eandidates, it is proposed that to the graduate who shall distinguish himself by the highest proficiency in all the departments of study, as shown by his final examinations and by his Thesis, a PREMIUM shall be presented, at the Commencement,—consisting of an Amputating Case,—or, if preferred, a selection of Books or Instruments of equivalent value, of his own choice. Punctual attendance upon all the lectures will be a requisite for competition for this Prize, the object of which, of course, is rather the honor than the material value of the reward. The prize will be accompanied by a certificate of its award.

LIST OF ALUMNI,

AD EUNDEM, AND HONORARY GRADUATES.

OF ADMISSION AND GRADUATION.

The Faculty of Philadelphia College, disposed to extend every facility to those who desire a thorough knowledge of medicine, and believing that there are many young gentlemen well qualified by education, talents, and moral worth, to become useful and honorable members of the profession, who would enter upon the study of medicine, or having entered upon, would prosecute their studies to graduation, were it not that their pecuniary means are too restricted to admit of their paying the fees of admission to Collegiate Courses and the honors of the doctorate, have established a beneficiary foundation upon which they will receive a limited number of such students annually. The number is at present limited to ten. Persons received upon this foundation will pay in lieu of the usual fees the sum of \$40 for perpetual admission to the lectures of the college, or \$20 at the time of matriculation for each of the two courses requisite to entitle them to a degree. All applications under this foundation must be made to the Dean, accompanied by an ingenuous statement of the claims of the candidates, and by letters of recommendation from respectable parties, and must be sent in as early as possible in September, or before the first of October. In deciding upon these applications the strictest impartiality and justice will be observed, and those will be admitted who come most strongly recommended for early industry, the most thorough preparatory education, for private and personal worth and respectability, and for intellectual promise. In all cases the sons of physicians, and next to them the sons of clergymen, shall receive the preference.

Degrees are conferred in March and July, in pursuance of a mandamus of the Board of Corporators, on such successful candidates as may be recommended to them by the Faculty, and issue in the name of the "President and Professors."

The requirements for graduation are the following: namely, that the candidate must be of good and approved moral character and conduct; that he shall have studied medicine for a period of at least three years in the office of a respectable practitioner; that he shall have attended at least one course of Practical Anatomy; that he shall have attended two or more full courses of lectures in Anatomy, Chemistry, Materia Medica, Medicine, Surgery, Midwifery and Institutes, of which courses the last at least shall have been in Philadelphia College, and the other, if not in this Institution, in some Medical school recognized by it; provided also, that the second course does not immediately succeed the first; that he shall have attended one course of Hospital Practice in Philadelphia, or its equivalent elsewhere;

that he shall submit a satisfactory thesis on some medical subject selected by himself, and written in his own hand on thesis paper, in Latin, English, French, or German; and finally, that he must pass a satisfactory examination before the Faculty.

The Theses of rejected candidates will be retained by the Faculty. Successful candidates may publish their theses, if the consent of the Professor by whom they were examined thereon be first obtained, and provided that no alteration be made therein, without the said Professor's permission.

The degree will not be conferred upon any graduate who shall absent himself from Commencement, unless by permission of Faculty.

Premature examinations will not be granted except under circumstances of extraordinary urgency and imperativeness, and only to unusually advanced students.

Applications for leave of absence of 1 for premature examinations must be made in writing to Faculty, and any student found to have used any artifice in order to obtain either, will be disappointed in receiving his degree, but will have his graduation the returned to him.

FUES.

For	Matriculation Fee,	only	once	paid,		٠						\$5	00
For	a full course, .	•				•		•				84	00
